

# Play Care Learning Center Physics Playground Infographic

**Tricycle Path**  
The tricycle path has tricycles of course but also wagons and towables for kids to learn to take turns and cooperate with each other in small groups.

**Play Structure**  
The play structure has been intentionally designed to provide a variety of skill level activities so children can advance at their own pace. The natural materials stay cool when it's hot out and canopies shade the 5 separate decks. The activities are different than those offered at public parks locally. There are 11 different ways up, 5 ways down and 4 bridges for children to explore.

**Activities**  
Activities will be teacher designed and conducted for children to learn key physics concepts and take place on the lawn and building porch areas. Experiments with acceleration, balance, mass and centrifugal force will help children learn how much fun math and physics can be.
